Introduction

Metadex is a decentralized exchange aggregator protocol that is multi-chain interoperable and focuses on enabling zero-fee transactions. Metadex intends to simplify on-chain trading by bringing together many chains like Ethereum, BSC, Fantom, Arbitrum, Avalanche, etc., under one roof. The main product's architecture allows it to operate without gas usage and is focused on aggregating liquidity from several protocols.

Developers may produce, maintain, and administer digital assets, also known as tokens, on the blockchain by writing programs. Smart contracts and decentralized apps (DApps) must be designed and built for this to operate. Many DeFi platforms are springing up, allowing users to communicate with their favorite cryptocurrency and offer liquidity.

Metadex will offer 100 percent decentralized products and solutions for decentralized money on the blockchain. MetaDex is a decentralized platform designed to list any DeFi exchange automatically. Our features are centred on the demands of crypto investors. All features will be available free, and users holding DSE and SUNI tokens will be eligible for rewards through our Meta Dex smart contract.

Metadex is a decentralized exchange data explorer. When you have the necessary tools, conducting your research and due diligence has never been easier. You will get certain extra bonuses and unique features if you own Metadex tokens, which will offer you an advantage.

Community Driven

We are a one-stop-shop that cuts down on the number of tabs you have open simply to trade. We think that a good user experience will help you be more efficient in making more trades that are informed because we are traders ourselves. Meta Dex will assess other blockchain networks' pairings and projects, and the service will always be free to the community.

Innovative DeFi Blockchain

As we all know, decentralized networks and funds require a means through which they may expand their criteria and continue to operate. Traditional financial products maybe transform into transparent protocols that function without using a medium or an intermediary with the aid of Decentralized Finances.

Many DeFi platforms are now being used to give customers the maximum liquidity for their selected coin. The sole downside of these DeFi is that they will not engage with users graphically through transactions.

Tokens can be fungible or non-fungible, and developers in such networks create, edit, store, and even administer them. DApps are digital programs that allow these tokens to work and function effectively.

Our device will play an important part in ensuring that consumers may completely enjoy their DeFi experience without any constraints! Users will be able to investigate such DeFi transactions graphically without any difficulties or review, thanks to Metadex's security and technology.

Products

1. Metadex Dao

Our platform will employ a smart contract designed exclusively for stake performance, and you will be able to leverage our DAO Stake mechanism to increase your tokens and investments. SUNI and DSE holders will get a stake exchange bridge, with the APY set by the size of the treasury deposit, and rewards issued to all participants

2. Metadex Pool

All DeFi groups will be included, and our technical staff will evaluate them on deployed smart contracts to reduce fraud in future projects. You will find a selection of projects that have been reviewed and assessed to assist you in making sound investment decisions.

3. Metadex Cross Chain

To ease asset trade, Metadex will create a cross-chain architecture that will connect several different blockchain networks. It will enable easier and more economical asset circulation for ETH, BSC, Polygon, and other assets.

4. Metadex Social Network

By looking at prominent influencers' social activities, you may learn about the hottest crypto debates and trending coins.

5. Metadex Track Pair

We provide information on newly developed and tested pairs for community distribution and transaction security.

6. Metadex Charts

Our API charts allow you to get information on token prices, trading pairs, traders, AMMs, on-chain transactions, and more at Metadex

Products

7. Metadex NFT

Learn about the tokens and coins that are being listed. Be a part of the beginning, and you will have a better chance of making money.

8. Metadex Swap

At Metadex, we seek to make blockchain data simply accessible and understandable. Get real-time information on swapping, adding, or deleting digital assets from AMM's liquidity pools.

9. Metadex Alerts

Invest in the best and safest APYs from numerous pools on decentralized exchanges to increase your money.

10. Metadex Launchpad

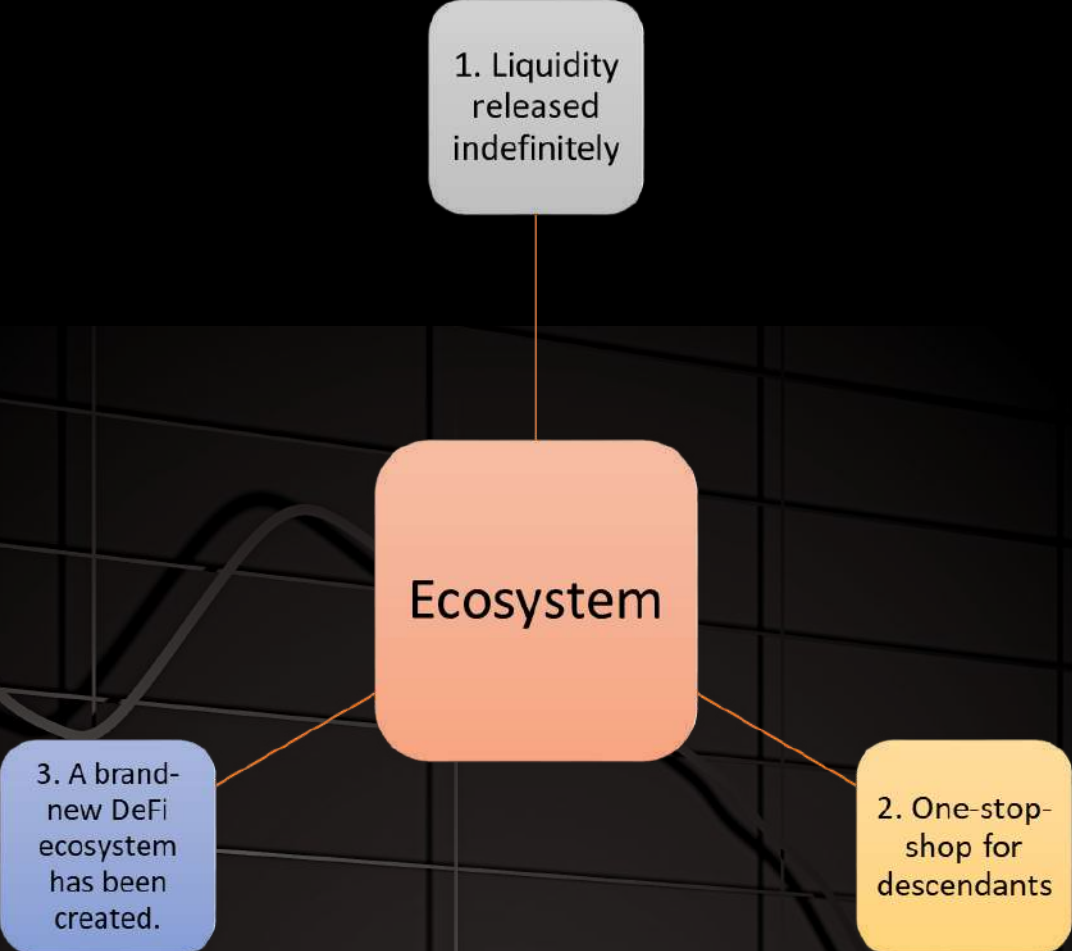

There is an onboarding menu for incubator ventures, seed rounds, private sales, and public rounds. You may invest in the top start-ups and get a fair return on your money.

11. Metadex News

Get breaking and trending news from project teams and major media sites in real-time.

12. Metadex Apps Native (android & iOS)

Our API charts allow you to get information on token prices, trading pairs, traders, AMMs, on-chain transactions, and more at Metadex

ECOSYSTEM

Metadex will provide a new business environment that will connect several chains and cover all application scenarios. To deliver easier, high-performance, low-cost, and non-differentiated crypto-asset financial services to worldwide users, it will simply extend usage scenarios and reduce the utilization barrier. The results are the fair asset price, fast transaction settlement, and free movement of values.

The core of DeFi's value is exchanged, but they are far from the end. Metadex will spread the panorama horizontally. Creating more innovative commodities is an important part of creating value. The following is what Metadex will do after that.

1. Liquidity released indefinitely

Over-collateralization and LP pledging with liquidity certificates are two approaches that Metadex will continue to support. It will also provide MDEX with various application scenarios and liquidity benefits, allowing customers to generate big profits while drastically increasing capital use efficiency.

2. One-stop-shop for descendants

Metadex will employ DeFi Lego recombination to generate new derivatives like leveraged trading gradually, options trading, and prediction markets, providing users with fuller, more efficient, and reliable products while also enhancing the benefits of MDEX owners.

3. A brand-new DeFi ecosystem has been created.

We want to have a vibrant ecosystem with more partners and developers at the top of our priority. The Metadex will provide complete support to developers and creative projects worldwide, including financial, technological, and community interaction. We will regularly examine each application and provide feedback.

OUR GOALS

Our objective is to compile a list of all DeFi exchange platforms, build native apps for various mobile devices, and create an API for worldwide and free blockchain chain consumption. Implement our services in the metaverse and provide investors peace of mind by validating projects.

Metadex aims to provide one-stop liquidity services for more high-quality assets and a secure, diverse, and cost-effective transaction experience for users.

THE PLATFORM

Metadex Stake Dao

Metadex's ultimate objective is to become a Metadex DAO with total decision-making authority for platform users.

The MDEX, which will be sent to the network's active users, will operate as a governance tool, allowing collectors and producers to vote on various upgrades and determine how the network might develop. As a result, the platform's governance is directly responsive to our most active users, moving Metadex closer towards becoming a public good governed by those who appreciate it most.

We want to construct a Metadex DAO to decentralize power and distribute it to the community. Contributors, administrators, moderators, volunteers, and developers will all be working toward the same objective. All project management powers and posts will be elected through the DAO, which is expected to take 2-3 years.

Metadex Ethereum Network

Ethereum is develop on top of a blockchain network. A decentralized blockchain, distributed public ledger that verifies and records all transactions. DApps are a burgeoning trend of Ethereum-based applications that disrupt or establish new business models.

Metadex BNB Chain Network

Binance Chain is a blockchain software system that Binance and its community have created. Binance DEX, on the other hand, refers to the decentralized exchange functionality built on top of the Binance Chain. The new blockchain and DEX are intended to provide a decentralized alternative marketplace for issuing and exchanging digital assets.

Metadex Shibarium Chain Network

Shibarium is likely an L2 built on top of an existing (Ethereum) blockchain. The ShibaSwap, a native decentralized exchange (DEX) that compensates SHIB holders depending on the total swaps taking place on the DEX, is already part of the project.

Metadex Matic Chain Network

Matic Network is an off/side chain scaling solution for current platforms that allows DApps and user features to scale and provide a better user experience.

Metadex Fantom Chain Network

Fantom is a fast and high-throughput open-source smart contract platform for digital assets and decentralized applications. The aBFT consensus protocol from Fantom provides unrivalled speed, security, and dependability. Transactions are virtually instantaneous, and costs are minimal.

Metadex Cronos Chain Network

Cronos is an EVM-compatible chain that runs alongside the Crypto.org Chain. Its goal is substantially to extend the Chain DeFi ecosystem by allowing developers quickly migrate programs from Ethereum and EVM-compatible chains to Chain DeFi.

Metadex Avalanche Chain Network

Avalanche is an open and programmable decentralised smart contract platform. Launch Ethereum DApps at avalanche that immediately confirms transactions and process hundreds of transactions every second, far beyond any available decentralized blockchain platform.

Metadex Arbitrum Chain Network

Arbitrum is Ethereum's next-generation layer-2 protocol. A layer-2 solution helps Ethereum scale by allowing transactions off-chain before aggregating and sending them to the base layer as a single transaction.

Metadex Metis Chain Network

Metis Chain Network is a decentralized economic platform that makes it simple and scalable to build, run, and develop any decentralized app, business, or community on the blockchain.

Metadex Aurora Chain Network

Aurora is a third-generation blockchain-based decentralized application platform aimed at bringing mature blockchain technology solutions to the whole industry.

Metadex Board Explorer

You may insert, resize, and reorganize "widgets" on the Dashboard. You will be able to keep track of all of your vital information in one spot and trade using Multiway widgets.

Metadex Pair Explorer

Explore token pairings in real-time with a transaction summary and graphing tools.

Metadex token Explorer

With Token Explorer, you can examine extensive analytics, crucial connections, liquidity pools, social buzz, and more for each ERC20 token.

Metadex Real-time transactions & Charts

You will now see full history charts when you open a pair page. The option to store indicator and graph templates has been adding real-time transactions.

Metadex Find Pairs

More pair token information, a trust score for the pair token, a share button, the ability to trade straight from the pair explorer page, and history chart data may be added to the pair explorer. Fix a fault where the latest price is not displayed on the final chart candle, and provide the ability to filter the transaction log by order type.

Metadex Wallet info & tracker

Make intelligent transactions by looking into your own and others' wallets. The Wallet Explorer will let you search for and obtain full information on any Ethereum wallet, including token balances, transaction history, and connected wallets.

Metadex Referral Program

Referring People to Metadex gives the referrer a percent of all future earnings from the referred. The platform covers this cost so that referred aren't negatively affected. The referral software permits passive profits as long as the referred ones use MDEX Token. You can earn rewards through referral or motivation programs via YouTube, WhatsApp, telegram, and different social media systems.

Metadex Launchpad ICO/IDO/IEO

MetaDex provides all of the tools, Venture Capitalist deals (VC deals), and resources needed to launch any accepted project successfully. Supporting these initiatives includes not just contributing with funding but also providing advice, technical assistance, and the necessary introductions.

Our system is community-driven and decentralized. Therefore, any project that is rejected by the community is also rejected by the system. However, any project approved onto the MetaDex platform is given all the necessary resources, support, and help to ensure a successful launch. MetaDex also provides a fantastic service in that it is a multi-chain initiative. It will assist projects in raising funds without incurring any additional costs.

Metadex Swap

This platform is designed to allow users to securely Swap Tron, Solana, Binance Coin (BNB), Ethereum, and many other tokens without relying on centralized services or losing control over their private keys. But People can buy and sell MDEX tokens through MetaDex Swap. All trades are automatically executed via smart contracts as a decentralised exchange, eliminating counterparty risks.

Metadex Real-time transactions & Charts

Metadex was given to liquidity providers in exchange for their services. Users pay the fees to trade on Metadex, which are distributed to liquidity providers based on the number of LP tokens they possess or the percentage of the pool they own. Because LP provides liquidity, they may incur a slight reduction and may not receive the same quantity of returned tokens. The main purpose is to keep the holder informed about the performance of the MDEX Token by preventing whale dips when used in a huge trade-off.

Metadex NFT

Metadex Non-fungible tokens (NFTs) are blockchain-based assets that are one-of-a-kind and non-transferable. The Metadex Platform allows these tokens to be linked to anything. The fundamental qualities of NFTs give them a particular value and fundamentally separate them from other types of assets. Verifiable uniqueness and indivisibility are among these properties. The quantity and provenance of any particular token may be ascertained without the requirement of a trustworthy intermediary since the underlying code is visible. NFTs are part of a bigger paradigm shift away from centralized to decentralized systems, in our perspective.

Metadex Social Network

Metadex is planning a massive international media tour to promote the collection to millions of people. The goal is to get as many people involved as possible, help them with their investments, or connect them with the right community. We are not hyping this project at all. We are providing real utility, passive income, and a fun way to invest in your future.

METADEX STAKE

All staked tokens are held in a safe wallet with a double-checking system. As more people, particularly institutional investors, discover the crypto market's lucrativeness, crypto staking is swiftly becoming a trend of earning passive income by just maintaining or locking assets in a wallet. Due to the technical limitations of staking cryptos, MDEX token staking platforms were created to allow investors, including those with little technical knowledge of cryptos, to stake MDEX and obtain Passive Earning or lucrative NFTs as staking incentives.
